Near-term outlook weak - cut to SELL

- Revenue grew 10% YoY to Rs 31bn in Q2 led by India business, but US price erosion continued to weigh on margins
- Margin guidance pared given US market challenges, though cost initiatives could save Rs 2bn-2.5bn over 12M
- We cut FY23/FY24 EBITDA 12%/18% and our TP to Rs 2,700 (vs. Rs 3,220); downgrade from HOLD to SELL

India business fuels growth led by acute therapies: Alkem reported 10% YoY revenue growth in Q2FY23 to Rs 30.8bn. India sales climbed 13%, outperforming the domestic market (+8%), led by price hikes, launches and volume gains. The company did well in acute therapies such as anti-infectives (+8% YoY), gastrointestinal (+23%), vitamins, minerals & nutrients (VMN: +12%), and pain management (+19%). Both anti-infectives and VMN were up against a high Covid-led base of last year. Anti-diabetes revenue in the chronic space grew 30% YoY led by launches such as Sitagliptin. The acute/chronic mix stood at 84%/16%.

Persistent challenges in US market: US business clocked in at US\$ 74mn in Q2 (+5.5% QoQ constant currency), but continued to face substantial pricing pressure, which depleted both gross (-470bps YoY to 57.6%) and EBITDA margins (-760bps YoY to 14.7%). Management intends to hold back capital allocation for the US market in light of the challenges to growth.

Margin guidance cut: Management has reduced its guided EBITDA margin range by ~100bps to 15-15.5% for FY23 (11.6% reported in H1). This is entirely attributed to the US business as Alkem expects healthy domestic margins where higher raw material prices are likely to be offset by a better product mix. To promote margin expansion, the company is undertaking cost-saving initiatives in areas such as network optimisation and restructuring. Management estimates savings of Rs 2bn-2.5bn from these measures over the next 12 months.

Downgrade to SELL: Relentless price erosion in the US market and elevated input cost, along with higher marketing spends, continue to take a toll on margins. We expect sluggish US business as investments are recalibrated amid challenges to growth. Further, baking in the softer margin guidance, we cut our FY23/FY24 EBITDA estimates by 12%/18%. Our TP consequently reduces to Rs 2,700 (vs. Rs 3,220), based on an unchanged 15x FY24E EV/EBITDA – a discount of 15% to the stock's 5Y average. Given 15% downside potential from the current stock price, we downgrade our rating from HOLD to SELL.

Earnings call takeaways

- New launches and volume gains fuel India business: Alkem continued to outperform the Indian pharma market (IPM) with 13.2% YoY growth in domestic business during Q2FY23 (vs. 8.2% for IPM), clocking market share gains across acute therapies, as well as anti-diabetes and urology in chronic areas.
 - Acute (84% of revenue): Acute therapies such as anti-infectives, gastrointestinal, VMN and pain management led the outperformance during the quarter.
 - Chronic (16% of revenue): Anti-diabetes led by the Sitagliptin launch grew at a strong 29.5% YoY (vs. 7.8% market growth) while urology, too, performed well. The company is growing off a small base in chronic therapies, led by product launches and better execution.
 - Trade generics: Management does not anticipate substantial impact from new entrants in the trade generics business on account of its competencies, such as distribution relationships and team penetration. The entry of new competition could be on account of the government's policy push, changing purchase patterns with opening of new stores, or demand from tier-3/4 towns.
 - Price hike: Price hikes contributed significantly to India business growth in Q2 vs. Q1.
- Continued challenges in US business: The US business continues to face significant pricing pressure, in line with the entire industry. Alkem had one shared-exclusivity product launch in the US market during Q2, but this didn't contribute much to revenue or margins. The company was able to only have a limited launch of gPradaxa because of supply chain issues. There are two generics in the market for the product as of now. Management intends to hold back capital allocation to the US market in light of the challenging market situation, which we expect will impact its earlier revenue growth guidance.
- No respite from margin pressure...: Alkem is facing sustained pressure from US price erosion and elevated raw material costs. Anti-infectives, which contribute 37-40% of the company's India business, continue to see high input prices compared to pre-Covid levels, especially for penicillin, causing a ~2% impact on gross margin. Management, however, believes prices will come down going ahead.

EBITDA margin contracted 760bps YoY in Q2 due to a lower gross margin (-470bps YoY) and higher overheads. Sequentially, gross margin was flat and EBITDA margin improved 685bps on the back of savings in overheads, employee cost and R&D cost as a percentage of revenue. The company did incur additional expenses towards new launches (especially Sitagliptin) in Q1.

...leading to a guidance cut: Management expects to miss its earlier EBITDA margin guidance by ~100bps and has now guided for a 15-15.5% range for FY23 (11.6% reported in H1). This is entirely attributed to the US business as Alkem expects healthy domestic margins where higher raw material prices are likely to be offset by a better product mix. To promote margin expansion, the company is undertaking cost-saving initiatives in areas such as network optimisation and

restructuring. Management estimates savings of Rs 2bn-2.5bn from these measures over the next 12 months.

- US ANDA filings/approvals: In Q2, Alkem filed 3 (6 in H1) abbreviated new drug applications (ANDA) in the US and received 4 approvals (8 in H1), including 2 (3 in H1) tentative approvals. As on Sep'22, Alkem's cumulative filings stand at 167 ANDAs and 2 new drug applications (NDA). Of these, the company has received approvals for 128 ANDAs (including 15 tentative approvals) and 2 NDAs. A total of 39 ANDAs are pending approval.
- Regulatory update: Two of the company's facilities have outstanding observations by the USFDA – at Indore, Madhya Pradesh, (one observation in Jul'22) and St. Louis, US (three in Nov'22). The company has filed a response for the Indore facility and is in the process of replying to the regulator for the St. Louis facility.
- **Forex loss:** There was some forex loss in Q2 on account of Chile operations, but this was far less than the previous quarter, per management.
- High API import exposure to China: Direct import dependency on China is 10-12%, but indirect dependency through active pharma ingredient (API) suppliers is 65-70%.
- Field force expansion: Alkem has 11, 000 marketing representatives (MR) at present, after adding ~1,000 in the last 12 months. Newly added MRs take roughly 2.5-3 years to reach breakeven. Current productivity per MR in acute therapies is Rs 0.65mn and in chronic therapies is Rs 0.38-0.39mn. Given the new additions, the focus now is to improve productivity.
- **R&D spend:** R&D spend is guided to remain at 5-6% of revenue for the current and next year.
- Healthy cash on balance sheet: Alkem has net cash of Rs 13.5bn on its balance sheet as on 30 September 2022. The company intends to grow organically as far as possible.

Valuation methodology

Relentless price erosion in the US market and elevated input cost, along with higher marketing spends, continue to take a toll on margins. We expect sluggish US business as investments are recalibrated amid challenges to growth. Further, baking in the softer margin guidance, we cut our FY23/FY24 EBITDA estimates by 12%/18%. Our TP consequently reduces to Rs 2,700 (vs. Rs 3,220), based on an unchanged 15x FY24E EV/EBITDA – a discount of 15% to the stock's five-year average. Given 15% downside potential from the current stock price, we downgrade our rating from HOLD to SELL.

Key risks

Key upside risks to our estimates are:

- Uptick in domestic business: Alkem draws ~70% of its revenue from domestic formulations, primarily from acute therapies apart from a growing chronic business. An uptick in chronic business and outperformance in the acute segment would pose upside risks to our estimates.
- Policy announcement on trade generics: The government's push towards reducing healthcare costs by promoting trade generics would help Alkem as it is a leader in the space.
- **Above-expected US performance:** Easing pricing pressure and more launches than expected in the US market could boost performance beyond estimates.

- Above-expected margins: Prudent cost management could alleviate margin pressure, taking profitability ahead of estimates.
- Adverse currency movement: Sharp INR depreciation against the USD represents an upside risk to our expectations.
