Important disclosures are provided at the end of this report.

India's improving Vaccination rate to boost growth

India's vaccinations run-rate (7-DMA) has increased to 7.5mn. At this pace, as much as 60% of the country will be fully vaccinated by Dec'21. This implies urban economic activity will also normalise in coming months. While near-term rural demand may be impacted by erratic monsoon rains, winter crop outlook looks far better. Government tax collections remain buoyant and give room for accelerated capex spending on roads and railways. Export demand too remains healthy and likely to continue. With food prices moderating, inflation may undershoot RBI's revised trajectory. The above backdrop gives room for yields to remain rangebound between 6.1% and 6.3%. While global central banks are looking at tapering QE injections, RBI is likely to reduce liquidity and then wedge between reverse repo and repo rate in Q4FY22.

Better outlook on rural demand: Monsoon was 24% below LPA in Aug'21 with poor rains seen in Punjab, Gujarat and North-East. Kharif sowing is 1.1% below last year's level led by 6.6% decline in cotton and 1.7% fall in edible oils. This will impact production of pandemic resilient agri sector. However, rains in Sep'21 are better. Winter crops sowing should be normal on the back of reservoirs being 94% of 10-year average (80% last year). Government has hiked MSP for mustard (8.6%) and lentils (7.8%) which are seeing highest demand supply mismatch in the country. Thus, outlook on rural demand remains far better than urban which is yet to normalise.

Centre's tax collections remain buoyant: Centre's gross tax collections over a 2-year horizon have jumped by 29.1% to Rs 7tn in FYTD22. This is led by 65% rise in corporate tax collections (at Rs 1.5tn) followed by 25% rise in

income tax collections (at Rs 1.6tn). Indirect taxes rose by 21% at Rs 3.9tn. Spending on the other hand is up by 6% over a 2-year horizon, led by capex (+19.4%). Revenue spending is up by 4.3%. In case of states, tax revenue growth has slipped marginally below (-0.8%) pre-pandemic levels at Rs 4.16tn (Rs 4.19tn in FYTD20). However, spending is up by 12.1%, led by 11% rise in revenue expenditure and 8.6% increase in capex. This has been supported by 85% jump in capital receipts (borrowings and loans).

Yields to remain rangebound: With robust tax collections, India's 10Y yield has fallen in Sep'21 compared with higher yields in most global markets. Retail inflation may also be lower than RBI's revised trajectory with food prices showing some moderation. Globally, Korea (BoK) raised rates for the first time in 3-years. US Fed is looking at tapering its bond purchases as early as Oct'21. However, spread of delta variant has led to moderation in oil demand and prices. The above backdrop favours 10Y yield to remain rangebound between 6.1-6.3% range. H2 Borrowing calendar will be most important driver in near-term.

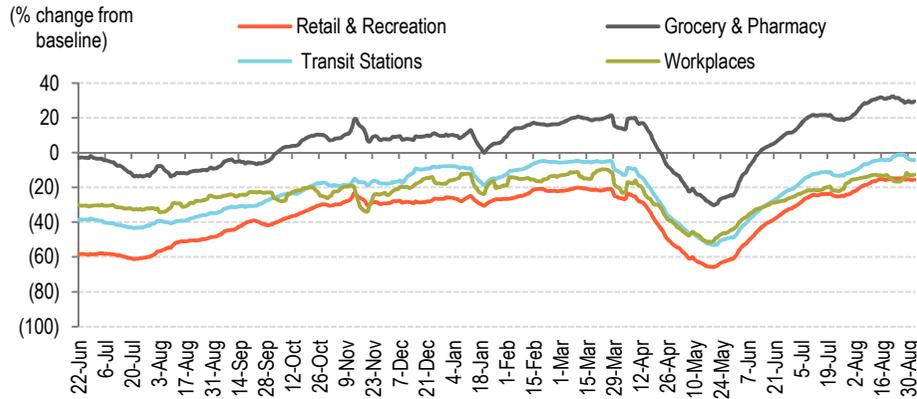

INR appreciates: INR rose by 1.9% in Aug'21 supported by FII inflows of US\$ 2.9bn. Softer oil prices (down by 5.1% in Aug'21 MoM) also supported INR. Trade deficit expanded in Aug'21 led by gold imports. While imports are likely to expand further as economic activity improves, strong export momentum is likely to keep trade deficit contained at US\$ 150bn in FY22. This implies that CAD will remain contained at ~1% of GDP in FY22. This should support INR in 73-75/\$ in the near term.
