Data showed that while PPI inflation in the US moderated to 0.3% in Nov'22 (same as Oct'22), it increased more than market estimates of 0.2%, on a MoM basis. On the other hand, University of Michigan's survey showed that consumer sentiment picked up in Dec'22 and inflation expectations eased markedly. This raised the possibility that the Fed may keep rates high for a longer period of time and hence the Fed meet takes the centre stage this week. BoE and ECB also meet this week and are expected to raise rates by 50bps respectively. Other major data releases such as CPI data of US, Germany, UK and India as well as US retail sales will also be closely watched.

- Global stocks ended mixed. Markets in Europe and China closed higher, while those in US and India ended lower. While uncertainties remain around how much longer US Fed will have to keep rates high, on the other hand, markets in Europe and China cheered the news of relaxation of Covid-19 restrictions in China. Sensex fell by 0.6%, dragged by tech, realty and metal stocks. It is trading further lower today, in line with other Asian indices.

- Except EUR, other global currencies edged up against the dollar. DXY closed flat amidst mixed US data (PPI and consumer sentiment index). EUR fell by 0.2% ahead of ECB meet. GBP rose by 0.2% as government announced new measures aimed towards overhauling its financial sector. INR appreciated by 0.2% amidst lower oil prices. However it is trading weaker today, in line with other Asian currencies.

- Barring Japan and China (flat), other global bond yields ended higher. Following higher than estimated data for US PPI in Nov'22, yields in US and Europe rose the most. Further as consumer demand in the US (Michigan sentiment index) remains steady, investors also expect rates to remain high for a longer period than earlier anticipated. India's 10Y yield rose by 1bps and is trading further higher at 7.32% today, following global cues.
