Slew of macro-economic prints (US CPI, China trade, central bank decisions) guided the markets. US CPI rose to 9.1% in Jun'22 (est.: 8.7%), up from 8.6% in May'22, driven by elevated gasoline prices (+60% YoY and +11% MoM). This has increased the possibility of even more aggressive rate hike by Fed. On the other hand, China's import data showed signs of slowing demand (1% in Jun'22 versus 4.1% in May'22), thus raising fears of global growth slowdown. Central Banks of Canada, Singapore and Philippines have further tightened their monetary policies to rein in inflation.

- Barring Nikkei and Shanghai Comp, other global indices ended lower as investors monitored hotter than expected US CPI print. With this, investors are anticipating a much aggressive monetary tightening by Fed with a possibility of even 100bps rate hike. Sensex (0.7%) too ended in red, led by oil and banking stocks. However, it is trading higher today in line with other Asian stocks.

- Global currencies ended mixed against dollar. DXY retreated from an all-time high and declined by 0.1% after US CPI rose to 40-year high in Jun'22. Euro rose by 0.2% and moved above the US\$ parity (breached earlier), despite concerns around energy prices. INR weakened further as it crawled closely to the 80/\$ mark. It is trading lower today, while other currencies are trading mixed.

- Barring Germany (higher) and China (flat), other global yields declined. US (4bps) and UK's (2bps) 10Y yields fell the most. US CPI print indicates that monetary policy tightening will continue, leading to fears of impending growth slowdown. UK's monthly GDP data surprised positively, however falling retail

sales and slump in recreation activities suggests revival still faces concerns.

India's 10Y yield fell by 6bps to 7.34%, supported by steady oil prices.
